

Look! Year 1 in action!

MATHEMATICS

The children have been learning to divide numbers into groups. Learning outcomes included writing the division operation as an equation and working collaboratively.

SCIENCE

Using observation, smell and taste, the children enjoyed learning about different spices. Learning outcomes included using descriptive language and explanation skills for purpose.

ENGLISH

Having created 3D cube models, the children had to write a list of instructions for someone else to copy their model exactly. Learning outcomes included editing skills and using precise, command vocabulary.

All three activities had the added learning outcome, fun! The activities were pitched to keep engagement and learning evenly matched. And no pencils and workbooks were needed!
